

L5: Decorated box

This project was conducted with a class of students aged 5 and 6 years old.

The teacher first showed the students the box decorated in Italy. She chose to do a collective artwork : a big mirror for the class. Because one box per student would have taken too much time, since this activity was actually offered to young children.

The used of the glue gun by the children required a lot of supervision and the obligatory presence of an adult. There was a risk of burning because the tool was very hot. It was very difficult to get a nice net of regular glue. Children also sometimes had trouble pulling the trigger to release the glue.

The teacher applied spray paint in the absence of children because of toxic fumes.
